DOCUMENT-IDENTIFIER: US 20010046230 A1

TITLE: Method and programmable device for
telecommunications applications

----- KWIC -----

Abstract Paragraph - ABTX (1):

A compact computing device with integrated network controller, integrated serial interface, on-board flash memory for non-volatile storage, integrated random access memory for temporary calculations and software execution, integrated single-chip processor, and method for controlling aforementioned components, loading, updating, and executing software that performs a plurality of telecommunication applications, such as the collection, buffering, encryption, and transmission of call record data collected from a private branch exchange telephone switch over a secure, encrypted communication medium, and the management, control, and monitoring over a secure, encrypted communication medium of telecommunication devices such as a private branch exchange telephone switch, a voice mail system, and other associated telecommunication systems. The device provides the ability to remotely configure, control, monitor, and update said telecommunication systems from anywhere in the world via the Internet. The programmable device can also provide the mechanism to perform Web based Application hosting. Specifically, a telecommunications management program can be provided to customers as a hosted service which relieves the need to perform costly installation and performance tuning that for large systems can exceed by several times the actual cost of the purchased software. Users can access the telecommunications program through standard web browsers and perform all normal functionality such as running reports, directory services, billing, etc

Summary of Invention Paragraph - BSTX (14):

[0013] The present invention is directed to a compact programmable computing device with an integrated network controller, integrated serial interface, an on-board flash memory for non-volatile storage, an integrated random access memory for temporary calculations and software execution, and an integrated single-chip processor. The present invention is further directed to a method for using the aforementioned components for loading, updating, and executing software that performs a plurality of telecommunication applications, such as the collection, buffering, encryption, and transmission of call record data collected from a private branch exchange telephone switch over a secure, encrypted communication medium. In addition, the device can be used for the management, control, and monitoring over a secure, encrypted communication medium of telecommunication devices such as a private branch exchange telephone switch, a voice mail system, and other associated telecommunication systems. The device provides the ability to remotely configure, control, monitor, and update said telecommunication systems from anywhere in the world via the Internet. By installing the device in lieu of traditional telecommunication management systems, which typically require a personal computer, or greater computing device, the technical skill level for installation personnel is greatly reduced. In addition, the device can then be remotely updated, controlled, monitored, and configured without further assistance from personnel who normally would need to be physically located near the telecommunication systems that are being managed. The device becomes an integral part of communicating with widely scattered telecommunication systems that all participate in a centralized telecommunication management system.

ATM, 1998. ICATM-98., 1998 1st IEEE International Conference on , 22-24 Jun 1998

Pages:385 - 394

[\[Abstract\]](#) [\[PDF Full-Text \(1096 KB\)\]](#) IEEE CNF

13 Structure and network control of a hierarchical mobile network architecture

Farag, E.; Saleh, M.; Elnady, N.; Elmasry, M.;

Computers and Communications, 1995. Conference Proceedings of the 1995 Fourteenth Annual International Phoenix Conference on , 28-31 March 1995

Pages:671 - 677

[\[Abstract\]](#) [\[PDF Full-Text \(496 KB\)\]](#) IEEE CNF

14 Use of centralized and replicated databases for global mobility management in personal communication networks

Leung, K.K.; Levy, Y.;

Universal Personal Communications, 1996. Record., 1996 5th IEEE International Conference on , Volume: 2 , 29 Sept.-2 Oct. 1996

Pages:852 - 859 vol.2

[\[Abstract\]](#) [\[PDF Full-Text \(844 KB\)\]](#) IEEE CNF

15 Performance and fault-tolerance analysis of a replicated HLR placement strategy in a broadband signaling transport network

Ghosal, D.; Meempat, G.; Tsong-Ho Wu;

Universal Personal Communications, 1998. ICUPC '98. IEEE 1998 International Conference on , Volume: 1 , 5-9 Oct. 1998

Pages:745 - 749 vol.1

[\[Abstract\]](#) [\[PDF Full-Text \(500 KB\)\]](#) IEEE CNF
